

ReNew Ozone

THE LEADING AUTHORITY ON OZONE WASHING SYSTEMS IN AUSTRALIA

The Glenlyn Aged Care Facility , Victoria

With regard to Occupational Health and Safety, Glenlyn is more than happy with the increased compliance that they are able to achieve, infection controls are better and the hygiene of the laundry is of a much higher standard.

Growing operational costs and the use of inefficient onsite laundry equipment compelled the owners of the **Glenlyn Aged Care Facility**, a 32 bed Aged Care nursing home located in Victoria, to look for cost savings in the operation of their laundry. After hearing about the use of Ozone technology in the wash process, **David Sandhaus, Maintenance Manager** decided to research Ozone in Laundry. During this time he made contact with Richard Jay Laundry Equipment, a leading authority on using Ozone for laundry in Australia.

Influencing Glenlyn to incorporate Ozone into their laundry were the

cost benefits, the level of disinfection applied and the fact that no hot water was needed.

Glenlyn engaged the Richard Jay Victorian team who then managed the entire process. Drawing on over forty years of laundry experience, the design, layout and machine selection suggested by Richard Jay has contributed to a professional OH&S compliant in-house laundry at the Glenlyn Aged Care Facility.

High quality Primus Washing machines and Tumble Dryers were selected along with ReNew ozone technology.

This equipment combination gave Glenlyn the opportunity to reduce their costs and improve the results from their in-house laundry, **“we have saved quite a lot of money since installing the ReNew Ozone system from Richard Jay, the quality of cleaning is**

noticeably better and we no longer need to do pre-wash cycles which saves on labour costs as well as energy saving”. David continues **“Other benefits have included; a reduction in the amount of chemicals used the absence of hot water and the removal of the cooling systems to re-cool the water before it's disposed of”.**

ReNew Ozone

With regard to Occupational Health and Safety, Glenlyn is more than happy with the increased compliance that they are able to achieve, Infection controls are better and the hygiene of the laundry is of a much higher standard.

“Dealing with Richard Jay, could not have been easier”, said David.

“We have looked at numerous other Ozone system alternatives but nothing stood out as much as the quality of the ReNew system from Richard Jay”.

“Their staff have been extremely helpful, reliable and prompt. Plus the technical advice provided on the use of Ozone has been beneficial to the continued operation of this system”.

The Richard Jay ReNew Laundry system is unique in Australia.

ReNew's patented Interfuser delivers ozone directly into the water in the wash basket, ensuring maximum disinfection.

We have cut our laundry budget because of the Richard Jay ReNew ozone system. “We're not just saving money; we are getting better results and helping the environment too.”

An added bonus, according to Glenlyn, is the quality of the linens and towels.

“Residents and staff tell us the linen is softer, whiter and fresher, since we introduced ReNew Ozone into the laundry”.
