

OUR MICROFIBRE RANGE

SUPERIOR CLEANING CLOTHS & FLOOR MOP PADS

NEW JayFlow microfibre products deliver quick, convenient and hygienic cleaning results that outperform traditional cloths and sponges.

Microfibre cleaning is ideal for all commercial industries, particularly those where hygiene is paramount.

Widely used in the food-service industry, microfibre products are also accepted as best practice in the healthcare and aged care sectors due to their superior absorption and dirt-removal properties.

The JayFlow range of microfibre cloths and microfibre cloth heads for mops are high-quality, machine washable and last for up to 600 wash cycles.

Why move to microfibre?

Microfibre is a lightweight alternative to cotton and traditional cleaning fabrics that gives a vastly superior result. The tightly woven polyester and nylon fibres effectively trap dirt and dust via a static charge.

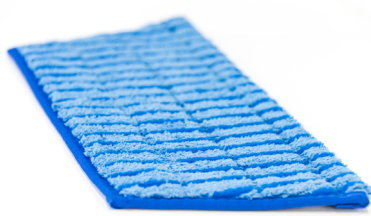

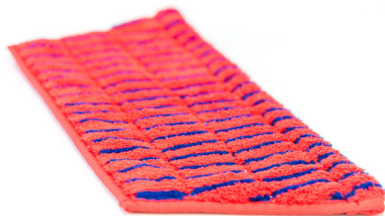

- + Removes more dirt and debris than regular cloths
- + Mopping with microfibre uses much less water
- + Requires minimal chemicals for a deep clean
- + Removes most surface bacteria just with plain water
- + Incredibly absorbent fabric
- + Very quick drying
- + Can be washed and reused hundreds of times
- + Lightweight material minimises the risk of back strain
- + Mitigates the risk of slips because floors dry faster when cleaned this way
