

# REMOTE CHEMICAL DISPENSER MONITORING HAS ARRIVED

## INTRODUCING CM2W (CONNECT MACHINES 2 WEB)

Richard Jay has always looked ahead and embraced new technologies. With the future in mind, we are continuously identifying ways to automate processes for cost-savings and better wash performance.

CM2W is a new remote monitoring system for chemical distribution companies who maintain a network of dispensers. It's a simple add-on that reduces maintenance requirements by up to 90% and can easily be retro-fitted to any existing laundry or warewashing chemical installation.

## Slash manual maintenance requirements by up to 90%

### How CM2W works

CM2W reduces the need for manual maintenance via remote monitoring and adjustments you can make from anywhere. The system is fitted with a flow meter that senses how much chemical is being dispensed (to the millilitre) and validates this to ensure precise chemical dosing with every wash cycle.

From your computer, you can see if a chemical is about to run out at a site or if there's a breakdown. This optimises wash performance as well as reducing manual maintenance.

Essentially, the CM2W system communicates with the machines in your network, which in turn communicate with the dispensers and the chemicals. CM2W software collects data to create reports on how well your dispensers are working.

### How CM2W benefits distribution companies

CM2W is ideal for companies that spend a lot of money sending technicians out to sites to diagnose service issues and equipment faults. With CM2W, you can keep an eye on your customers' equipment from anywhere and pre-empt issues.

You can log in, see what the issue is and adjust anything dosing-related remotely within minutes. This helps distribution businesses maximise value and save significantly on maintenance costs.

**EXCLUSIVE TO RICHARD JAY**

Designed by dedicated software engineers, the CM2W platform is completely secure, robust, intuitive and packed with useful features.

## REAL BENEFITS FOR YOU AND YOUR CLIENTS

### — **Cost savings from less downtime**

Remote monitoring means your clients don't have to wait for a technician to come out and diagnose an issue, minimising disruption to their businesses.

### — **Up to 90% less maintenance required**

Make adjustments and monitor performance remotely instead of having to go out to site.

### — **Extend pump tube life by up to 50%**

Precise flow meter validation means that even when peristaltic pump tubes are wearing out, the right amount of chemical will be dispensed.

### — **Constant level of dosing guaranteed even with peristaltic pumps**

CM2W ensures this precise dosing with all types of pumps for optimised performance.

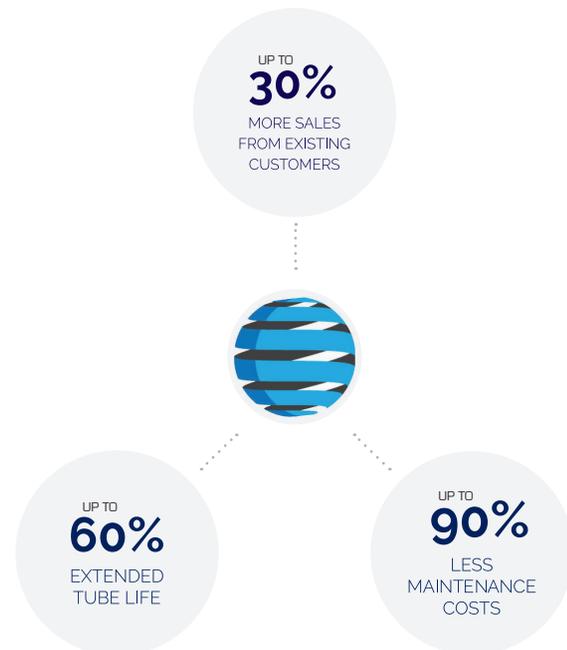

### — **Access remote reporting**

CM2W software gives you a rundown of all laundry actions and cycles you run on the machine. You can log on to a particular site and access a full breakdown of all reports. See all programs to the exact millilitre and validate everything.

Another report provides a bar graph showing all of the chemical consumption per chemical per day. This is great for troubleshooting because you can see issues with particular pumps and dosing, and make adjustments.

### — **Access data in real time via the Cloud, which stores your information for five years**

Monitor dispensing equipment from anywhere

### **Key features for clients and equipment owners**

- Precise and instant chemical dosing
- Real-time alerts and notifications
- Automatic pump calibration, self-diagnosing, and precise and constant dosing
- Compatible with virtually any brand of dispensing system
