
WHEN IT COMES TO FACILITY MANAGEMENT WE KNOW HOW

Our complete range of laundry solutions makes
cleaning simple and streamlined

WORKING WITH FACILITY MANAGERS

Richard Jay partners with facility managers nationwide to provide flexible, cost-effective and energy efficient solutions for superior cleaning results and reduced manual maintenance.

Our range includes commercial laundering machinery for mops and microfibre cloths, chemicals, dispensing, trolleys and microfibre cleaning supplies. Richard Jay solutions are hand-selected by our laundry experts for durability, reliability and maximum return on investment.

Why launder your cleaning equipment in-house?

For improved cleaning performance and complete disinfection, Richard Jay supplies world-class machinery with dedicated mop and microfibre programs.

A concern for many facility managers is that outsourcing the washing of mop heads and cleaning cloths is costly and time-consuming – not to mention that cleaning results and disinfection standards are not guaranteed. Without proper care from dedicated cleaning equipment, the lifespan of mop heads and cloths is also significantly decreased.

As the industry moves to a microfibre cleaning-based model, the advantages of switching to an on-premise laundry are clear.

1. Total control over the laundering process
2. Superior cleaning results
3. Reduced costs overall
4. Guaranteed compliance with Australian laundry standard AS4146:2000
5. Precise wash cycles proven to extend the lifespan of microfibre cloths and mops.

See your ROI in advance

Richard Jay's advanced ROI calculator can determine whether commercial laundry solutions are a worthwhile investment for your business by identifying clear costs and savings.

The calculator ascertains what machinery is required, gives you an accurate indication of running costs, calculates cost per wash cycle and per laundry item, and shows you how much you'll save over the lifespan of cloths and mop.

MOP & MICROFIBRE LAUNDERING

Specialist washers with dedicated programs

Whether your mop heads are made of microfibre, yarn or sponge, cleaning and preparing them for professional use requires ultra-rigorous laundering processes. Richard Jay supplies specialist washers for this purpose.

Our range of laundry machines are equipped with Efficient Dosing technology and feature a range of programs designed specifically for mop and microfibre washing and disinfection.

By calculating the exact amount of detergent, water and electricity required for each load, Efficient Dosing reduces your cost per wash, makes life easier for your staff, extends the life of fabrics due to less wear and tear, and leads to better wash results overall.

Works brilliantly on microfibre

The beauty of microfibre is the fact that it's a high-tech, washable material requiring less water and chemicals to produce phenomenal cleaning and disinfection results. Without a good professional laundry system to care for microfibre, however, these advantages no longer apply.

Our range boasts unrivaled expertise in microfibre cleaning, with washers featuring a wide range of specially designed programs to care for specialist fabrics like microfibre.

Automatic Savings + Efficient Dosing technology

Reduce water consumption and energy costs

Richard Jay mop washers provides a built-in Automatic Saving (AS) system that measures the weight of the load and adds the exact amount of water and energy consumption to produce a perfect wash result.

No more overdosing or underdosing

Based on the weight of your wash, our system automatically calculates the correct amount of detergent to wash more effectively and extend the life of mops and microfibre.

CONVENIENT SOLUTIONS

Serving you locally and immediately

Richard Jay are proud to be the only genuinely national provider in the Australian commercial laundry industry. Our team of 260+ registered service agents operate across the country – in every state and territory. Wherever you are, our registered experts can visit your premises to conduct urgent repairs and servicing. The Richard Jay After Sales Care Centre is your first port of call for machinery, repairs, scheduled servicing and Australia's largest inventory of spare parts.

Avoid equipment breakdown

Scheduled maintenance is important to maximise machinery performance and output, as well as assisting with your accreditation agreement. Richard Jay can tailor a Preventative Maintenance Agreement (PMA) as per machinery manufacturer recommendations. Having a PMA in place will ensure your business is compliant with the requirements of Australian standard AS4146:2000.

EASY LAUNDRY FINANCE SOLUTIONS

We understand that facility managers have competing demands and budgets to balance. Experience the ease of dealing with one supplier for everything (including new equipment) when you choose JayWay. Our all-inclusive subscription solution includes everything for a simple monthly fee calculated in a way that suits you best.

Capital Plus from Richard Jay gives facility managers access to brand-new machinery as well as breakdown servicing for one regular monthly payment, over a 5-to-8 year contract. This allows you to select the commercial laundry machines that best suit your requirements with no capital outlay.

CHEMICAL AND DISPENSING SOLUTIONS

A complete range of advanced dispensing solutions is available from Richard Jay for laundry dosing, warewashing dosing, washroom (soap and paper dispensing) and proportioning purposes. Richard Jay partners with manufacturers such as Brightwell in the UK to supply industry-leading chemical and automatic dispensing solutions for your organisation.

As Australia's trusted name in commercial laundry, Richard Jay also provides a full range of high-performing chemicals for your laundry, kitchen, housekeeping and hand care needs. Our JayChem range is geared towards safety and sustainability. This is part of Richard Jay's broader commitment to care and exceptional service.
